

Customer Delivery Risk Communication Standard

Document: STD-SALES-QA-009

Applies to customer order SO-8821 and all quality events that affect confirmed delivery.

The sales team must not promise a recovery date before quality confirms isolation scope and substitute batch availability.

Required inputs before external communication

1. Quality event number and affected serial range.
2. Frozen quantity, released quantity, and substitute batch quantity.
3. CAPA status and temporary containment result.
4. Production recovery plan approved by the production manager.
5. Customer-facing risk level approved by the quality manager.

Escalation and message template

Critical: customer shipment is blocked or regulatory impact is possible.

Major: delivery date may move by more than 24 hours.

Standard wording: affected products are under internal containment; confirmed conforming inventory will be allocated first; updated delivery commitment will be provided after quality release.
